

Lightline – illumination for shower channels

Article description

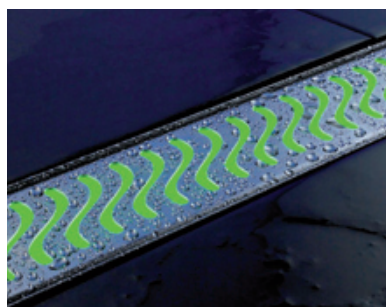

- Illumination kit for ACO ShowerDrain shower channels
- Suitable for stainless steel design gratings, not suitable for glass and mineral covers and tiles
- With integrated switch control, for contact-free On and Off function
- Consisting of:
2 rechargeable LED modules and
1 recharger 220 V connection
- LED module suitable for underwater use

ACO ShowerDrain E-line – product benefits

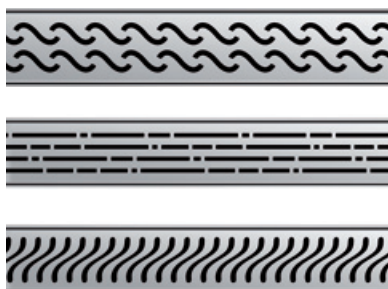

Welded-on gully bodies

The individual components of the ACO ShowerDrain E-line are solidly welded together. This means that there can be no leaks – either from extreme loads or by wear and tear over time.

Replaceable grating designs

The different grating designs available allow refreshing the appearance of the room after a while by simply replacing the electro-plated gratings.

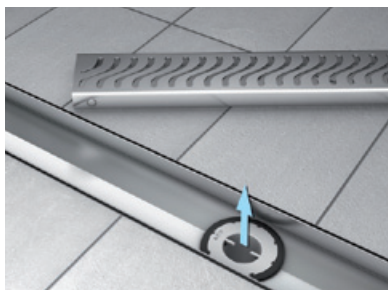

Illumination for shower channels

The Lightline lighting set includes LED modules and rechargeable batteries which can be added at any time. For shower channels with a stainless steel designer grating there are four different colours available (Page 24).

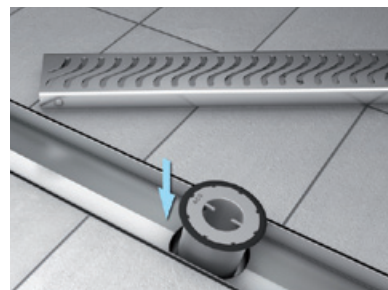

Large diameter cleaning opening

To clean the ACO ShowerDrain gully the designer grating is first removed using a lifting aid. Then the two-part odour trap can be lifted out.

Now you have direct access to the pipework. The functional drain can be cleaned quickly and simply.

After cleaning, the odour trap and the designer grating are replaced.

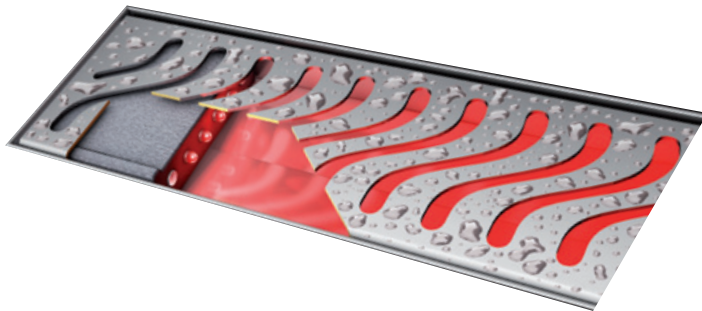

Hair strainer

To prevent pipes being obstructed by hair, the plastic hair strainer can be inserted. It fits all odour traps used with ACO E-line ShowerDrains.

Art. no. 9010.72.00

Lightline – water sensitive lighting for shower channels

Product features

- Lighting kit for ACO ShowerDrain E-line shower channels
- suitable for stainless steel designer gratings, not suitable for glass and tile covers (tileable, 10 mm)
- with integrated switch control for contact-free on and off function
- consisting of: 2 rechargeable LED modules and 1 charger with 220 V grid connection
- LED module suitable for use under water

Retro-fit a new shower experience

Lighting can be fitted with the straight, curved and square ACO ShowerDrain E-line shower channels. You can select blue, red, green, white or rainbow. The way the lighting works is very simple: As soon as there is enough water in the channel, this completes the circuit for the contacts on the LED module, and the LEDs start to glow.

After waiting a few minutes, the lights will switch themselves off, unless there is water in the channel.

If the shower is used each day for 15 minutes, then the batteries need re-charged after about 3 months.

■ You will find order data for **Lightline** on Page 18

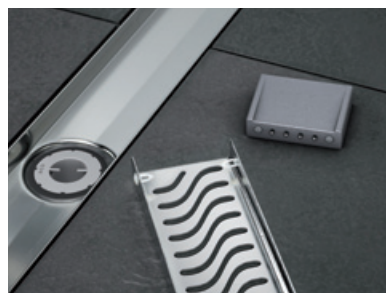

Lighting set

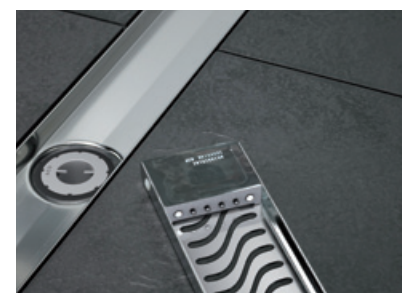

LED-modules

Prepare LED-modules for installation

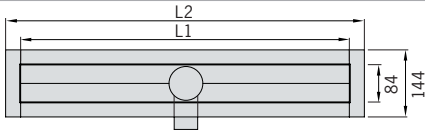

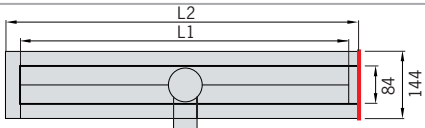

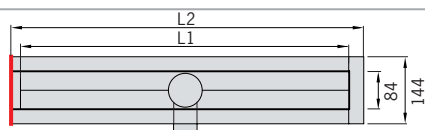

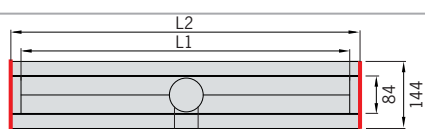

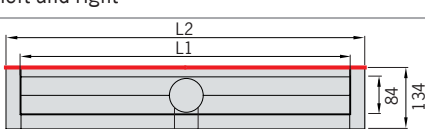

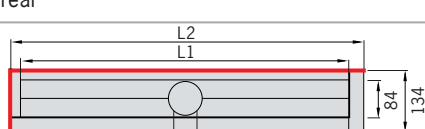

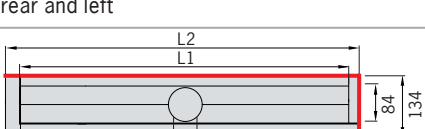

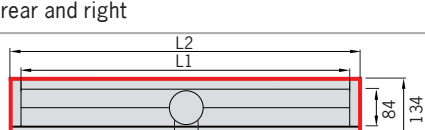

Remove the grating using the lifting aid

Insert the LED-module and fix with the adhesive supplied, then put the grating back in place

LED modules

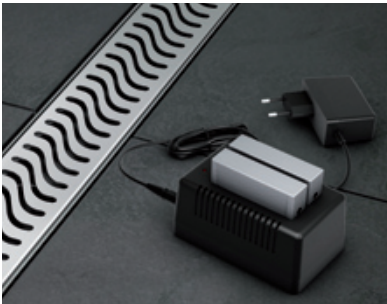

Shower experience for retrofitting

Illumination is possible for the straight, curved and corner ACO ShowerDrain shower channels. Following colours can be chosen: Blue, Red, Green or Rainbow. Function of illumination is very easy: As soon as sufficient water has accumulated in the channel, the circuit connects to the contacts of the LED modules and the LEDs start glowing. After a delay of several minutes, the illumination switches off if no more water is entering the channel.

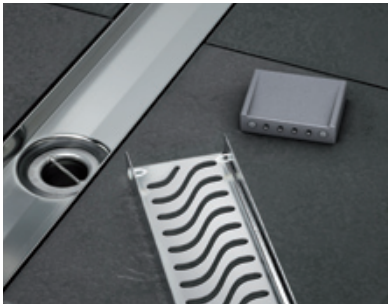

Considering a daily showering period of 15 minutes, the batteries must be recharged after approx. three months.
