

Barrier free

Perfection

ACO bathroom drainage

A high-angle photograph of a modern shower stall. The floor is made of large, light-colored square tiles. A long, narrow, stainless steel shower floor channel (ACO ShowerDrain) is installed along the base of the glass walls. The channel has a series of small, rectangular openings for drainage. A glass door is partially open, revealing the channel's interior. A shower head is mounted on the wall above the channel. The text "ACO ShowerDrain" is overlaid in a white box in the top right corner.

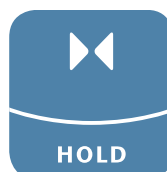

## ACO ShowerDrain

For developers and architects who prioritize long-term considerations, the ACO ShowerDrain offers a prudent luxury choice with a strong emphasis on reliability. Every aspect of this product can be trusted, from its smooth passivated surfaces that ensure secure drainage and hygiene in bathrooms, to its seals, joints, and material thickness that guarantee minimal noise emissions.

The ShowerDrain is a shower floor channel that seamlessly blends form and function. It serves as an ideal solution for high-end bathrooms featuring elegant glass fixtures and natural stone floors.

It is also well-suited for public applications where the absence of barriers is of utmost importance. The channel body, made of durable stainless steel, has a lateral gradient that ensures effective water drainage.

ACO ShowerDrain is a high-quality choice that offers a reliable, aesthetically pleasing, and functional solution for a range of applications. Its focus on detail, from its luxurious design to its practical features, makes it a trusted option for those looking to create long-lasting and visually appealing bathroom spaces.

## Standard Grating Designs

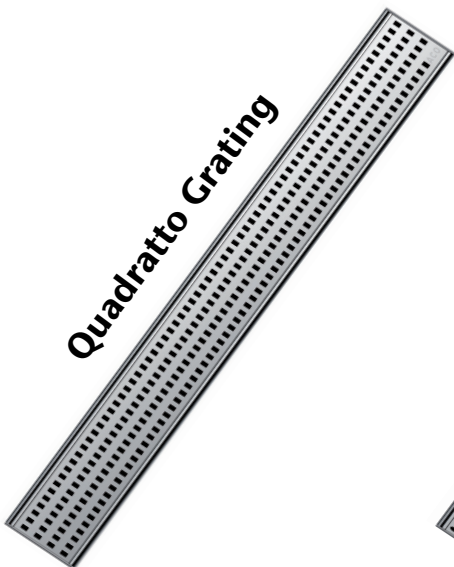

ACO India's shower channel gratings are meticulously engineered to provide efficient water management in shower areas, offering a reliable solution for capturing and draining water effectively. These gratings are specifically designed to prevent any accumulation of water and potential water damage, ensuring a safe and hassle-free bathing experience.

The grating designs are carefully crafted to facilitate the smooth flow of water into the channels, minimizing the risk of blockages or obstructions. This enables the water to be swiftly directed towards the drain, preventing any pooling on the bathroom floor and reducing the chances of slips and falls.

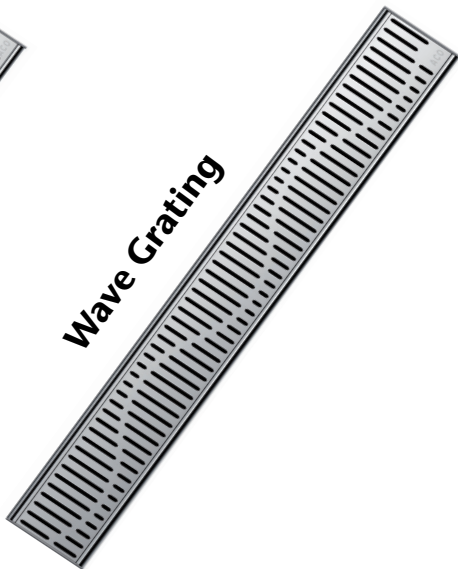

ACO India's shower channel gratings combine functionality, durability, and ease of maintenance to offer a comprehensive solution for effective water capture and drainage. By preventing water accumulation and potential damage, these gratings contribute to a safer and more hygienic showering environment.

# ACO ShowerDrain C

## Product Information

- Material: Stainless steel material grade 316
- Load class: Meets K3 requirements
- Visible channel width: 80 mm
- Pickle Passivated Surface, Suitable for Bare foot area
- Grating Variants: Quadratto, Wave, Tileable (10mm tile)
- Depth 21mm
- Outlet type: Vertical, DN50 at the center
- Customizable lengths upto 2400mm
- Flowrate: 1.0l/s

# Gully (Foul Air Trap)

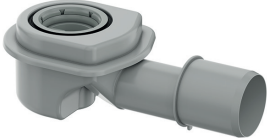

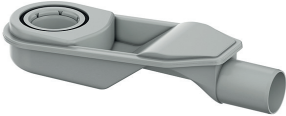

Flexible alignable gully

The ACO ShowerDrain M+ can be combined with two different gully bodies to make it suitable for the installation situation. The gully body of the ACO ShowerDrain M+ can be flexibly aligned according to the course of the drainage pipe. Screwed in the middle, the gully body is therefore a secure, force-locked connection that holds the gully securely in position after installation.

Injected seal

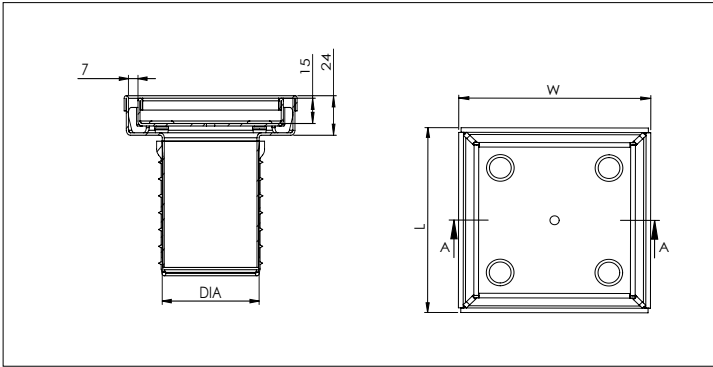

During installation and beyond the period of usage, a permanently tight connection of all components is very important. Therefore, all gully bodies are equipped with a permanently injected seal. This ensures that the seal is not accidentally lost or can slip during installation.

Product	Water Trap	Outlet Size	Flowrate	Article No
	30mm	40/50 mm	0,5 l/s (with 20 mm water built-up)	9010.81.21
	25mm	40 mm	0,5 l/s (with 20 mm water built-up)	9010.81.22

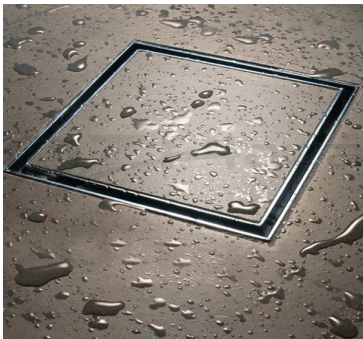

## ACO Gully Top

### Product Information

- Top sections with square gratings
- Material: Stainless Steel 316.
- Loosely inserted square grating
- Load Class: K3 (300Kg)
- Height Adjustable
- Pickled and passivated for corrosion resistance
- Grating with NBR support to avoid rattling noise and have firm connectivity with gully body.
- Space to accommodate 10mm tile
